Include a course or program description for the Bulletin (30-40 words maximum for courses, 100 for programs):

Designed for science and engineering students. Calculus-based physics. Covers electrical charge and field; magnetic field and its sources; current and resistance; simple DC and AC circuits; and electromagnetic induction. Lecture only. (Associated laboratory course is PHYS 232.)

Pre: MATH 122 with a "C" or better, and PHYS 221 with a "C" or better.

Fall, Spring

### Rationale or Justification for change:

We propose to change the General Physics sequence from the current two semester sequence [5Cr + 5C] to a three semester sequence [14Cr + 3/2Cr + 3/2Cr]. We believe the current two semester sequence gives students too much material in a short time. By making this change we hope to accomplish the following:

1. Give students more time to absorb the material.
2. Improve student retention rate and understanding of physics.

This is the second course in the proposed General Physics series. The laboratory is separated from the lecture in order to give students options to take the course with or without the laboratory.

### For General Education or Cultural Diversity Courses Only***

</tr>
</tbody>
</table>

* For Writing Intensive Courses, attach a description of the kind and quantity of writing.
* For Upper Division Courses, include a description of the respects in which it is broad and general rather than narrow and specific, and so suitable as GE.

Attach paper copies of the following:

a. Syllabus or course outline.

b. Course’s student learning outcomes associated with each GE competency or CD designation.

c. List of strategies to be used to assess students’ achievement of each GE competency or CD designation.

### For New Courses***

</tr>
</tbody>
</table>

Course content or title is similar to courses in other departments. (Attach copy of letter of agreement with other program(s) contacted. Indicate the nature of the discussions and/or resolution of differences or potential conflicts.)

Attach paper copies of the following:

a. Syllabus or course outline.

b. Course’s student learning outcomes.

c. A list of resources required to offer and support this course.

d. A description of how teaching this course will affect department staffing.

e. If 400/500 level course, an explanation of added expectations of graduate students.

**Comments:**

PHYS 222 (3cr) General Physics II

Rationale:
We propose to change the General Physics sequence from the current two semester sequence [5cr + 5cr] to a three semester one [4cr + (3+1)cr + (3+1)cr]. We believe the current two semester sequence gives students too much material in a short time. By making this change, we hope to accomplish the following:
1. Give students more time to absorb the material.
2. Improve student retention rate and understanding of physics.

This is the second course in the proposed General Physics series. The laboratory is separated from the lecture in order to give students options to take the course with or without the laboratory.

Catalog Course Description:
Designed for science and engineering students. Calculus-based physics. Covers electrical charge and field; magnetic field and its sources; current and resistance; simple DC and AC circuits; and electromagnetic induction. Lecture only. (Associated laboratory course is PHYS 232.)
Pre: MATH 122 with a “C” or better; and PHYS 221 with a “C” or better.
Fall, Spring.

Course Objectives:
To learn the basic physics concepts and laws of electricity and magnetism.
To understand these concepts and to be able to use the basic equations of electricity and magnetism to solve physics problems involving charge, current, electric and magnetic fields.

Learning outcomes:
To understand the nature of electric charges, conductors, and insulators.
To understand Coulomb’s Law, and to be able to calculate the forces between static electric charges.
To understand the definition of electric field, and to be able to calculate the electric field caused by a charge distribution.
To understand electric potential and capacitance.
To understand electric current and sources of resistance to electric current.
To be able to use Ohm’s Law to calculate the resistance of a given conductor.
To learn Kirchhoff’s Rules, and to be able to use the rules to solve simple DC circuit problems.
To understand the definition of magnetic field, and how a magnetic field interacts with charges and currents.
To be able to calculate the magnetic field caused by a current or by a moving charge.
To understand electromagnetic induction and inductance.
To understand alternating currents, electromagnetic oscillation, and impedance in an AC circuit.
To know the different kinds of magnetic materials.
To learn Maxwell’s equations.
Staffing plan:
Offering this course has minor effects on the department’s staffing plan. With careful planning, offering this course should not increase the load of the faculty presently in the department.

Resources required: No new resources are required.

Total possible lectures 38-40 51-63
In class tests 3-4 3-4
Total allowed classes 42-44 56-59

* Coverage with flexibility

Class meets three 50-minute periods a week for lecture. Students’ learning outcomes are assessed by homework and tests.
To: UCAP Committee members  
From: Youwen Xu, Chair, CSET Curriculum Committee  
Date: Oct. 26, 2007  
Subject: Endorsement for the proposed new General Physics course sequence

The endorsements for the proposed new General Physics course series (Phys 221, 222, 223, 232, and 233) from departments and programs that are affected by the changes are attached with the proposal of Phys 221. Please note that the endorsements are for the whole sequence, not just for one course.

Memo to: Brenda L. Flannery, Ph.D.
Assistant Vice President for Undergraduate Studies and International Education
Academic Affairs, 315 Wigley Administration Center

David S. Gjerde, Registrar
Office of the Registrar, 132 Wigley Administration Center

From: Mark A. Pickar, Chair, Department of Physics and Astronomy

Re: Addendum to the Fall, 2008 Schedule for PHYS 222

Dear Dr. Flannery and Mr. Gjerde:

On behalf of my department, I would like to request an addendum to the Fall, 2008 schedule. I would like to have allowed the offering of PHYS 222 as a 5 credit course (as described in the 2007-2008 Undergraduate Bulletin) during the Fall, 2008 semester so that students who start the old General Physics sequence in the Spring, 2008 semester will have the opportunity to finish that sequence in Fall, 2008. The addendum would only be for Fall, 2008. The new General Physics sequence would be in full effect in Spring, 2009.

To help inform students of this, I will have notices describing the upcoming transition distributed to students taking both PHYS 221 and PHYS 222 this Spring, 2008. I will also have notes pointing out the transition included in the web-posted schedules for both PHYS 221 and PHYS 222 for Fall, 2008.

Please let me know of anything I can do to assist you in this matter.

Sincerely,

Mark A. Pickar, Chair
Department of Physics and Astronomy
Minnesota State University, Mankato
