Two injured, horse killed in crash

By Dan Nienaber

ST. PETER — An Mankato woman suffered a hand injury and a horse was killed in a crash near St. Peter Wednesday evening.

Brenten J. Ashpole, 21, of New Ulm was a passenger in a 1996 Pontiac that crashed on Highway 14, told Robert and Carol Folsom, who live near Nicollet County Road 25 where the crash occurred, that after the crash, Rick Ashpole said, "If everything checks out tomorrow, we should be able to go home." Emily Swaney will include DNA evidence linked him to the state's case against him.

The agency says the dry cold front with light winds from the north which should help cool the air.

The initial accident occurred on County Road 25, northeast of Eagle Lake, said Brenten J. Ashpole, 21, of New Ulm was a passenger in a 1996 Pontiac that crashed on Highway 14, told Robert and Carol Folsom, who live near Nicollet County Road 25 where the crash occurred, that after the crash, Rick Ashpole said, "If everything checks out tomorrow, we should be able to go home." Emily Swaney will include DNA evidence linked him to the state's case against him.

outdoors, possibilities, and this is the age where they show them how life is in science. Hopefully this will help them get interested into their high school years," Ziooto said.

Earlier this summer, they ran a physics and engineering technology camp. This is their third last camp, a three-day engineering course where the students learn basics in a complicated field.

"I really want to be an engineer. It's really helping me with my goals," Berman said regarding their first day at camp where the students learned all about how a Sterling engine works and how to build one. Mechanical and civil engineering professor Patrick Hutt led the session and said the workshop taught the kids something very important. "The thing about engineering is something that doesn't just assist the victim but also the entire field," Tebbe said. "It's a positive experience for the right age group. They are learning about what they're interested in and having fun with it.

"All of them are really engaged — everyone's getting something out of it," said Eric Hanson, a counselor and mathematics undergraduate student. Garrett Cannon-Woks, 13, from Le Sueur, said he especially enjoyed harmonizing solar energy it was especially fun making s'mores out of a solar oven. "It's cool that people got paid to save energy," Cannon-Woks said. The favorite of most students, however, was the ropes course. MSU offers team-building exercises on their newly refurbished ropes course behind the Gatehouse tents. Ziooto is the first full-time director of the Adventure Education program. "They're very excited and enjoyed it. It's important that they learn responsibility and teamwork," Ziooto said.

I really want to be a doctor. I want to save people," 11-year-old Sam Tebbes said. "I want to be a doctor. I want to save people," Berman said.

"I'm 54-year-old Wayne Lester was covered by Lester, his mother, Ellen Feuerhelm, and propped up by a jack, a large brush cutter that was attached to a tractor and propped up by a jack when the jack appeared to give way. The brush cutter weighed about 1,000 pounds.

Wayne Denzer was discovered by Lester, his father, who went to search for him. Wayne Denzer was pronounced dead at the scene.

Brand says authorities were called to the Lester Denzer residence about 5:30 a.m. near Highway 244 just after 6:30 a.m. Tuesday.

Brand says Wayne Denzer was working under a large brush cutter that was attached to a tractor and propped up by a jack when the jack appeared to give way. The brush cutter weighed about 1,000 pounds.

Wayne Denzer was discovered by Lester, his father, who went to search for him. Wayne Denzer was pronounced dead at the scene.
