Program Description:

The Earth Sciences are focused on understanding the Earth's interrelated physical systems including: the atmosphere, biosphere, geosphere, hydrosphere, and Earth's place in the cosmos. Fundamental to Earth Science are the impacts of people on our planet's natural systems as well as the interaction of physical, chemical, and biological processes at all spatial scales ranging from submicroscopic to planetary, and over time scales from the immediate to billions of years. Thus, courses in Astronomy, Biology, Chemistry, Geography, Geology and Physics are required to fulfill the degree requirements. Majors in Earth Science can gain expertise in addressing critical societal issues related to environmental management, resource management, natural hazard management, resource exploration, atmospheric and climate sciences, water resources, and much, much more.

Admission Requirements:

A minimum of 32 earned semester hours. GPA of 2.0 ('C').

Advising:

You are expected to meet with your advisor on a regular basis to ensure courses are taken in an order that will lead to successful completion of the degree.

A complete listing of program faculty, policies, and course descriptions is available in the undergraduate bulletin.

PROGRAM NOTES

The Certificate in Geographic Information Science provides skills in geospatial technologies that are critical in the workforce today. We cannot encourage you enough to complete this certificate. In Earth Science, more math is better. Strongly consider math through Calculus I and II and Ordinary Differential Equations and one year of Physics, rather than the one semester required. To become proficient in a foreign language, more than two semesters coursework is recommended as is a study abroad experience.
